# Use Cases

Use Case ID:	AT01		
Use Case Name:	Add Trip		
Created By:	Tan Ming Rui, Ezra	Last Updated By:	Tan Ming Rui, Ezra
Date Created:	31/01/23	Date Last Updated:	31/01/23

Actor:	User
Description:	Adds a trip, which is defined by the trip's start point and end point. Each trip also has a name.
Preconditions:	1. The user must be logged in.
Postconditions:	1. The user is able to Execute trip
Priority:	High
Frequency of Use:	Low
Flow of Events:	1. User fills in the name, start point, and end point of the trip they wish to create. 2. User clicks "Save".
Alternative Flows:	
Exceptions:	EX-S2: User clicks "Cancel" 1. System returns to homepage
Includes:	GP01
Special Requirements:	
Assumptions:	1. The connection of the app and the Database is established
Notes and Issues:	

Use Case ID:	RR01		
Use Case Name:	Register		
Created By:	Tan Ming Rui, Ezra	Last Updated By:	Tan Ming Rui, Ezra
Date Created:	31/01/23	Date Last Updated:	31/01/23

Actor:	User
Description:	The user registers an account with their email address and password.
Preconditions:	<ol style="list-style-type: none"> <li>1. The User's device must be connected to WiFi/Cellular Data.</li> <li>2. The email address given is not registered in the System.</li> </ol>
Postconditions:	<ol style="list-style-type: none"> <li>1. The registered user account is stored in the database.</li> <li>2. The User can login to the System using the registered account.</li> </ol>
Priority:	High
Frequency of Use:	Once per User
Flow of Events:	<ol style="list-style-type: none"> <li>1. The System requests the User to input the following information fields: <ul style="list-style-type: none"> <li>• Email address</li> <li>• Password</li> <li>• Confirm Password</li> </ul> </li> <li>2. The System validates the required fields.</li> <li>3. User clicks on the Register button</li> <li>4. The System sends an email with a confirmation link to the registered email address.</li> <li>5. If the User clicks on the confirmation link, the user account is successfully created.</li> <li>6. Return to User Login menu after confirmation of account creation.</li> </ol>
Alternative Flows:	<p>AF-S4: Text fields are not filled in appropriately</p> <ol style="list-style-type: none"> <li>1. The System will prompt the User to fill in the required fields.</li> <li>2. The System returns to Step 1.</li> </ol> <p>AF-S2: Email already exists in the database</p> <ol style="list-style-type: none"> <li>1. The System will prompt an error message "Email address is already in use"</li> </ol> <p>AF-S2: Username already exists in the database</p> <ol style="list-style-type: none"> <li>1. The System will prompt an error message "Username is already in use"</li> </ol>

Use Case ID:	DT01		
Use Case Name:	Delete Trip		
Created By:	Nepal Aaradh	Last Updated By:	Nepal Aaradh
Date Created:	01/02/2023	Date Last Updated:	01/02/2023

Actor:	User
Description:	Delete a trip that has been saved
Preconditions:	<ol style="list-style-type: none"> <li>1. The user must be logged in</li> <li>2. The trip being requested to be deleted must exist</li> </ol>
Postconditions:	The trip is no longer existent
Priority:	
Frequency of Use:	
Flow of Events:	<ol style="list-style-type: none"> <li>1. The user selects a trip to delete from a list of previously saved trips</li> <li>2. The user confirms that the deletion should take place</li> </ol>
Alternative Flows:	<ol style="list-style-type: none"> <li>1. The user does not confirm the deletion and instead decides to cancel the delete request</li> </ol>
Exceptions:	
Includes:	
Special Requirements:	
Assumptions:	<ol style="list-style-type: none"> <li>1. The connection of the app and the Database is established</li> </ol>
Notes and Issues:	

Use Case ID:	ET01		
Use Case Name:	Edit Trip		
Created By:	Nepal Aaradh	Last Updated By:	Nepal Aaradh
Date Created:	01/02/2023	Date Last Updated:	01/02/2023

Actor:	User
Description:	Edit the name of a previously saved trip
Preconditions:	<ol style="list-style-type: none"> <li>1. The user must be logged in</li> <li>2. The trip being requested to be edited must exist</li> </ol>
Postconditions:	The trip name has been updated
Priority:	
Frequency of Use:	
Flow of Events:	<ol style="list-style-type: none"> <li>1. The user selects a trip to edit from a list of previously saved trips</li> <li>2. The user enters the new name for the trip with which to replace the current trip name</li> <li>3. The user confirms the change</li> </ol>
Alternative Flows:	
Exceptions:	EX1: If user cancels while editing <ol style="list-style-type: none"> <li>1. System returns to “Manage trips” screen</li> </ol>
Includes:	
Special Requirements:	
Assumptions:	<ol style="list-style-type: none"> <li>1. The connection of the app and the Database is established</li> </ol>
Notes and Issues:	

Use Case ID:	ST01		
Use Case Name:	Star Trip		
Created By:	Nepal Aaradh	Last Updated By:	Nepal Aaradh
Date Created:	01/02/2023	Date Last Updated:	01/02/2023

Actor:	User
Description:	‘Star’ a trip (indicate a trip as a frequently used trip)
Preconditions:	<ol style="list-style-type: none"> <li>1. The user must be logged in</li> <li>2. The trip being requested to be starred must exist</li> </ol>
Postconditions:	The trip is pinned to top of the list of previously saved trips making it easily accessible to the user
Priority:	
Frequency of Use:	
Flow of Events:	<ol style="list-style-type: none"> <li>1. The user selects a trip to star from a list of previously saved trips</li> </ol>
Alternative Flows:	
Exceptions:	
Includes:	
Special Requirements:	
Assumptions:	<ol style="list-style-type: none"> <li>1. The connection of the app and the Database is established</li> </ol>
Notes and Issues:	

Use Case ID:	ET02		
Use Case Name:	Execute Trip		
Created By:	Goel Armaan	Last Updated By:	Goel Armaan
Date Created:	31/01/23	Date Last Updated:	15/02/23

Actor:	User
Description:	Records an instance of a saved trip with the user's selected mode of transport.
Preconditions:	<ol style="list-style-type: none"> <li>1. User is logged in</li> <li>2. User has the trip saved</li> </ol>
Postconditions:	<ol style="list-style-type: none"> <li>1. An instance of the saved trip is added to the user's trip history</li> </ol>
Priority:	High
Frequency of Use:	High
Flow of Events:	<ol style="list-style-type: none"> <li>1. User clicks a saved trip</li> <li>2. User chooses their preferred mode of transport</li> <li>3. User reviews the estimated price</li> <li>4. User clicks the execute trip button</li> <li>5. An instance of the saved trip is recorded in the system</li> </ol>
Alternative Flows:	
Exceptions:	<p>EX1: User cancels execution</p> <ol style="list-style-type: none"> <li>1. User can choose not to execute a trip, at which point the use case exits at either step 2 or step 3</li> </ol> <p>EX2: Trip cannot be executed</p> <ol style="list-style-type: none"> <li>1. If a chosen mode of transport is unavailable, the user cannot move on to review estimated prices.</li> <li>2. The user is informed of this limitation and is asked to choose another mode of transportation.</li> </ol>
Includes:	GP01
Special Requirements:	
Assumptions:	The user executes a trip right before they embark on it
Notes and Issues:	

Use Case ID:	GR01		
Use Case Name:	Get Route		
Created By:	Goel Armaan	Last Updated By:	Goel Armaan
Date Created:	31/01/23	Date Last Updated:	31/01/23

Actor:	Google Maps API
Description:	Retrieves the route between a trip's starting point and destination point for the chosen mode of transport
Preconditions:	1. User is logged in 2A. User is adding a new trip or 2B. User is executing a saved trip 3. User device has a working WiFi or Cellular connection
Postconditions:	1. The correct route from the trip's starting point to the trip's destination point with the chosen mode of transport is displayed
Priority:	High
Frequency of Use:	High
Flow of Events:	1. User has entered the starting and destination point for a new trip 2. The API is queried and the route for a private car is displayed by default.
Alternative Flows:	AF-S1: User is executing a saved trip 1. If the user is executing a saved trip, they do not have to enter the starting and destination point as required in step 1.  AF-S2: User chooses another mode of transport 1. If the user chooses another mode of transport, the API is queried again and a route with the new mode of transport is displayed.
Exceptions:	EX1: No route can be found 1. If there is no route between the start and destination point for the selected mode of transport, a route cannot be displayed. 2. The user is informed of this limitation and is asked to try another mode of transportation  EX2: API is unavailable 1. If the Google Maps API is unavailable or cannot be queried, a route cannot be displayed. 2. The user is informed of this limitation and is asked to try again later.
Includes:	

Special Requirements:	
Assumptions:	
Notes and Issues:	

Use Case ID:	GP01		
Use Case Name:	Get Price		
Created By:	Goel Armaan	Last Updated By:	Goel Armaan
Date Created:	31/01/23	Date Last Updated:	31/01/23

Actor:	Car Park API, Public Transport API, Taxi API
Description:	Calculates an estimated price of a route with the chosen mode of transportation
Preconditions:	1. User is logged in 2A. User is adding a new trip or 2B. User is executing a saved trip 3. The trip's route is valid 4. User device has a working WiFi or Cellular connection
Postconditions:	1. A well-estimated price of a route with the chosen mode of transportation is displayed
Priority:	High
Frequency of Use:	High
Flow of Events:	1. User selects a valid mode of transportation for a trip 2. The respective API is queried 3. The price for the trip's route with the chosen mode of transportation is displayed
Alternative Flows:	AF-S2: 1. If the mode of transportation is biking or walking, no API is queried. The price is 'free'.
Exceptions:	EX1: API is unavailable 1. If the API used in calculating the price for a chosen mode of transportation is unavailable, then the estimated price cannot be calculated 2. Instead, a message is shown to the user stating the estimated pricing for the chosen mode of transportation is currently unavailable
Includes:	GR01
